

Deliver a better IT service to your students

Tony
Co-Founder
Software2

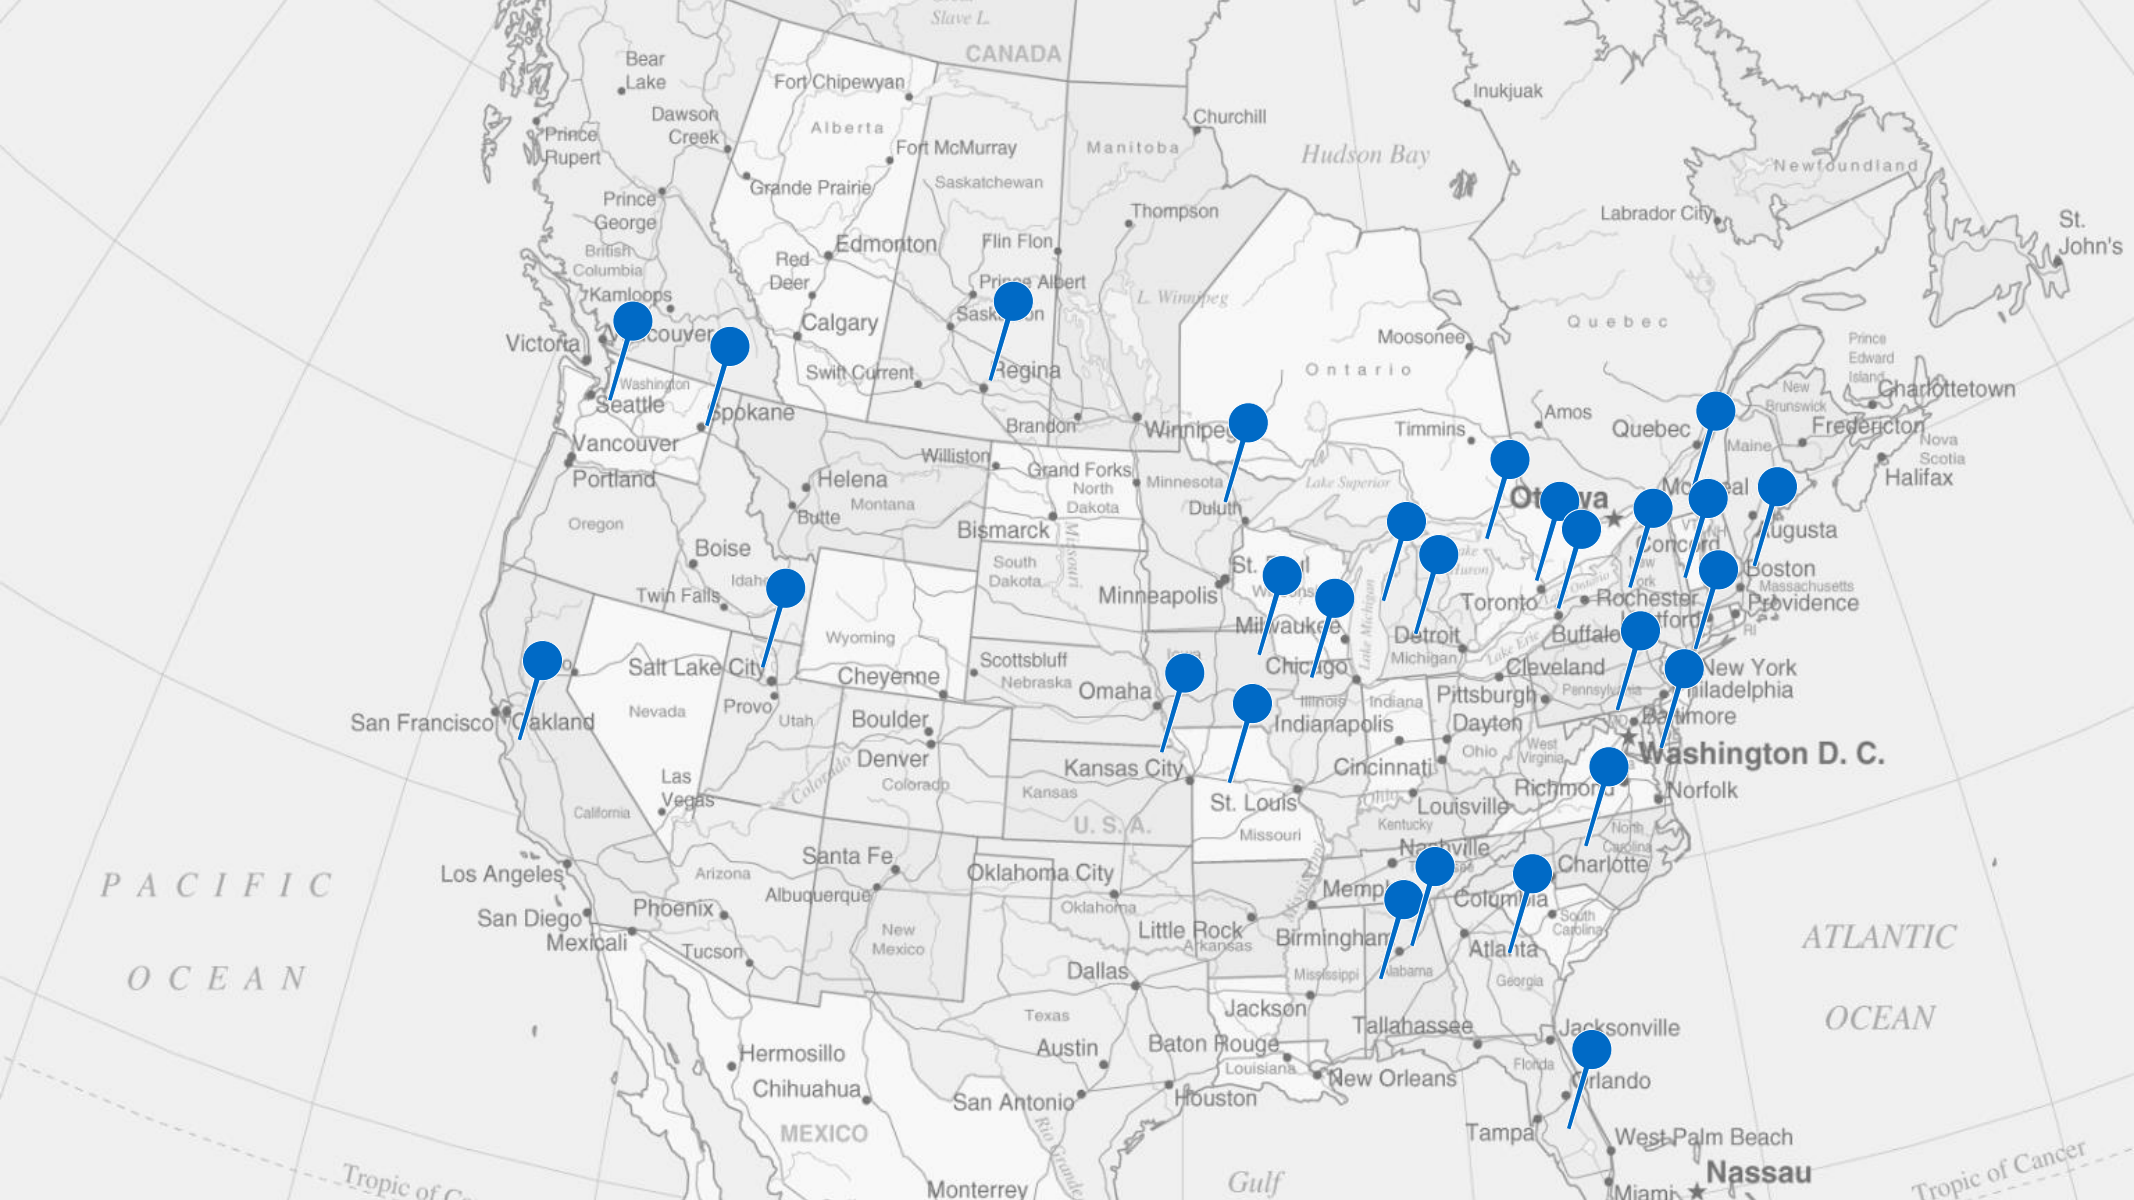

Today's webinar

1. Background
2. Unique challenges faced by Higher Ed IT
3. Campus labs, open-access and BYOD
4. Using technology to provide a service

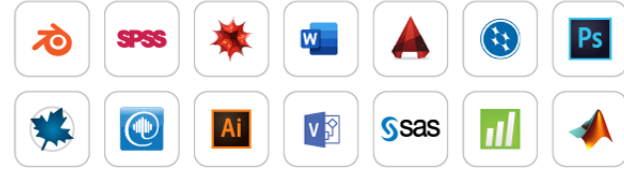

Background

Challenges in Higher Ed IT

100s of apps

1,000s of devices

10,000+ users

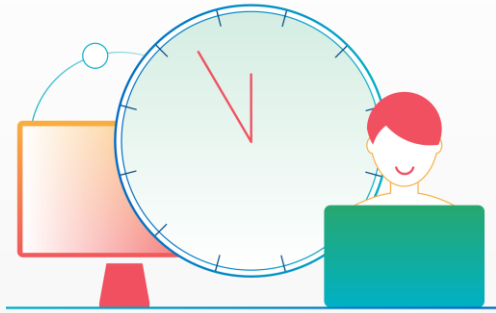

Google Earth
Google
Google Earth lets you fly anywhere on Earth to view satellite imagery, maps, terrain and 3D buildings.

NVivo
QSR International
An all-purpose qualitative data analysis system.

Audacity
Audacity
A free, open source, cross-platform audio software for multi-track recording and editing.

VLC
VideoLAN
A free and open source multimedia player and framework that plays most popular audio and video formats.

Key use cases in Higher Ed

On-campus labs

Open-access learning

BYOD demands

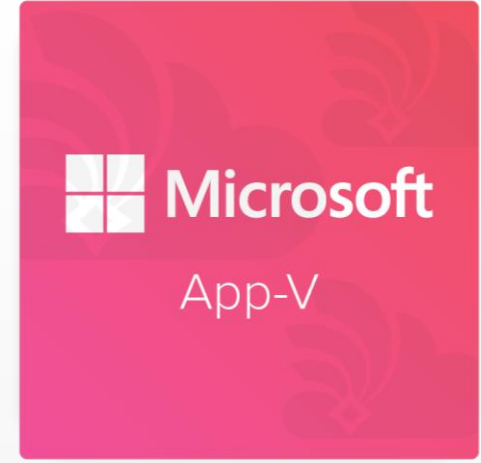

No single technology exists to support all these use cases...

The 'old school'
(image/installs)

VDI and Remote
Desktops

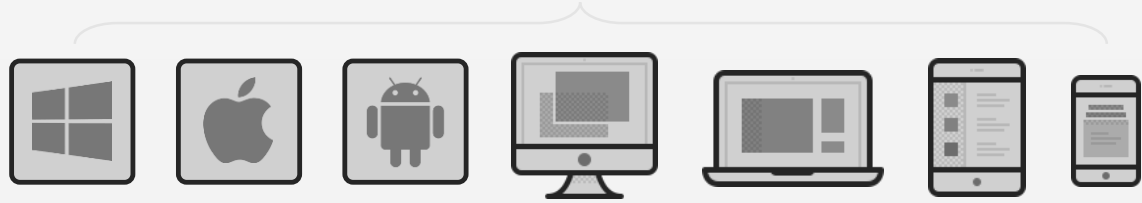

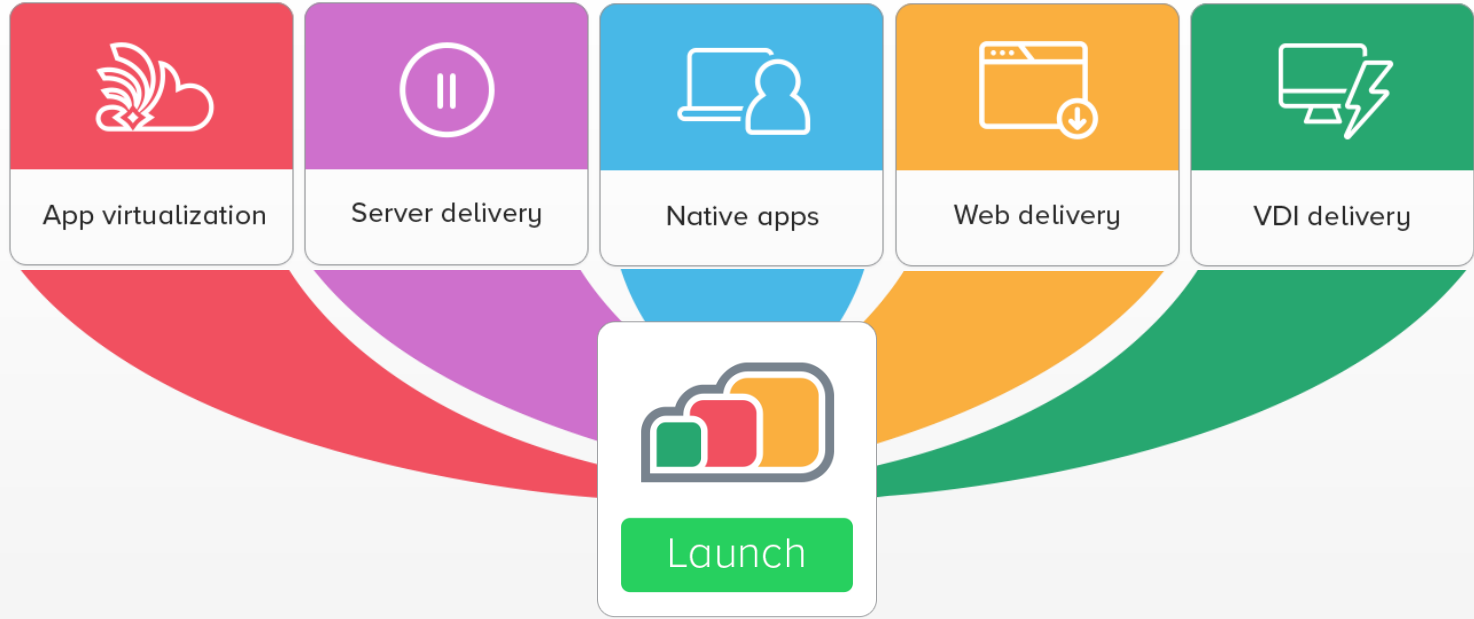

Application
Virtualization

“

Focus on the students and their use of technology.

Not the technology itself.

The image shows a screenshot of the AppsAnywhere application catalog interface. At the top, there is a navigation bar with the 'AppsAnywhere' logo and several menu items: 'All Available', 'My Favourites', 'Unavailable', 'Categories', and 'Operating Systems'. Below the navigation bar, there are several application cards. One prominent card is for 'Google Earth', which includes a description: 'Google Earth lets you fly anywhere on Earth to view satellite imagery, maps, terrain and 3D buildings.' Another card for 'iView' is partially visible. The interface is clean and modern, with a light blue color scheme.

Improve with useful data

- Deliver cost savings
- Work on strategic initiatives
- Drive BYOD adoption
- Support non-Windows users
- Improve student outcomes!
